

CASE STUDY

Selex

Selex have stored with Len Lothian for many years. As listed below we use many of the services offered.

Warehousing, Receipt, Handling, Despatch and Stock Control.

Pallets are delivered into a Len Lothian facility. They are checked to make sure no damage has occurred before being forklifted off and stored in the warehouse on pallet racking.

All the pallets are receipted into store on the Stock control system so Len Lothian know exactly where the pallets are stored within the warehouse. When we call the pallets off to be despatched out of store Len Lothian are able to locate the pallets via the stock control system and despatch the pallets out.

A full audit trail of all pallet movements is supplied to us monthly.

HEATED STORAGE, SECURE SELF STORAGE.

Components are stored at a Len Lothian facility. Monitoring of the humidity regularly and maintaining the humidity at a particular level is important so the components do not deteriorate. This is done by controlling the temperature in the storage area to keep the humidity low.

Again, all the components in store are fully stock controlled. Items are receipted into store via scanning the items. The items are stored on shelves which are scanned confirming the location.

Selex e-mail a picking order. Len Lothian staff take the order and pick, pack and despatch the items.

"FOR OVER A DECADE LEN LOTHIAN HAVE PROVIDED SELEX GALILEO WITH AGILE AND FLEXIBLE STORAGE SOLUTIONS. THIS PARTNERSHIP HAS ENABLED OUR BUSINESS TO REACT QUICKLY TO OUR MARKET AND CUSTOMERS CHANGING REQUIREMENTS."

Robert Boyd
